Punto 2. Medio resonante diluido: $n = n_0 + \chi'(\nu)/2n_0$, $N = n + \nu\, dn/d\nu$, $v = c_0/N$. Zona naranja: $|\nu - \nu_0| < \Delta\nu/2$
acoplamiento débil: $\chi_0 Q^2/n_0^2 = 0.2$
parámetros de la Fig. 5.6-4: $\chi_0 = 0.05$, $Q = 10$
$dn/d\nu > 0$ (normal)
$dn/d\nu < 0$ (anómala)
$dn/d\nu > 0$ (normal)
$n(\nu)$
$N(\nu) = c_0/\nu$
$v/c_0 = 1/N$
c_0/n_0
mínimos locales de v en $\nu_0 \pm \frac{\sqrt{3}}{2}\Delta\nu$
$(\nu - \nu_0)/\Delta\nu$
